MUSEUM LECTURE April 29, 8:30 p.m.

Cyril Stanley Smith, distinguished metallurgist and professor at Massachusetts Institute of Technology, will talk on ART, SCIENCE, AND TECHNIQUES IN HISTORY at The Cleveland Museum of Art on Friday evening, April 29 at 8:30. Professor Smith's lecture will explore the history of man's practical knowledge of the properties of materials --- emphasizing metals --- and the bearing it has, both on the form that art works take, and, on the development of scientific understanding.

Professor Smith was educated at The University of Birmingham in England and at the Massachusetts Institute of Technology. He has researched in the fields of art and science and has published A History of Metallography (1960) as well as numerous papers in scientific and technical journals. He has also contributed to Structure in Art and in Science, edited by Gyorgy Kepes (1964) and A History of Technology, edited by Charles Singer (1957).
